SKILLS

Languages	Python, Golang, Java, Kotlin, Ruby, PHP, C, HTML, CSS, JavaScript, TypeScript
Databases	MySQL, PostgreSQL, MongoDB, BigQuery
Frameworks	React.js, Next.js, Node.js, Express.js, Angular
API	REST, GraphQL, gRPC
Testing	Playwright, Selenium, PyUnit, JUnit
AI Tools	Claude Code, Codex, Openclaw
Other Tools	Git, Jira, AWS, GCP, Kubernetes, Docker, Android Studio

WORK EXPERIENCE

Flipp

Toronto, ON

Software Engineer

Oct. 2023 – Present

- Build various features powering Flipp's advertising platform NativeX, integrating flyers across 3,700+ digital properties in partnership with leading news, lifestyle, and native app platforms.
- Lead the global market expansion into Colombia by collaborating with cross-functional teams to deliver scalable growth and operational impact.
- Lead the design and delivery of a dynamic coupon module for Family Dollar's Smart Coupons program, collaborating with cross-functional teams to drive significant business impact and digital engagement.
- Lead frontend code quality improvements by integrating and configuring SonarQube, boosting code coverage from 4% to 80% and strengthening overall maintainability.
- Lead the refactor of React components by consolidating related modules into a unified parent component with shared functionality, improving code reusability, performance, and maintainability.
- Create native functionalities using Kotlin tailored for the Android SDK to seamlessly integrate with webview features across diverse shopping app partners.
- Enhance Golang backend services by swiftly resolving bugs and collaborating for improved software quality and infrastructure robustness.
- **Tech Stack: React.js, Next.js, TypeScript, Golang, Kotlin, AWS, Playwright, Scala, Apache Spark**

Achievers

Toronto, ON

Senior Software Engineer

Aug. 2021 – Jun. 2023

- Architected the design and co-led the development of a Python-based reporting microservice from the ground up, as part of a migration from monolithic to microservice architecture hosted on GCP.
- Utilized Kubernetes to deploy and effectively manage a wide array of services on the dynamic

infrastructure of the Google Cloud Platform.

- Designed GraphQL schema, created API endpoints for custom queries, and wrote unit and integration tests using TypeScript. The endpoints were integrated within an Apollo server environment.
- Developed Python unit tests and integration tests that enabled comprehensive testing of critical service components within the pipelines.
- Provided effective mentorship to co-op students, fostering their professional growth and development.
- **Tech Stack: GraphQL, Python, PHP, BigQuery, PostgreSQL, Kubernetes, gRPC**

Tulip Retail

Toronto, ON

Intermediate Full Stack Developer

Jan. 2018 – Aug. 2021

- Supported an ecommerce website called Well.ca using LAMP stack, averaging over 3000 orders per day.
- Maintained and improved the user-facing website as well as the Warehouse Management System which is used to fulfill over 200 orders per hour on average.
- Led the development of a project involving McKesson Canada that integrated SAP Hybris with the Well.ca platform.
- Developed a Tulip API that facilitated communication between the Hybris-based Well platform and the Tulip-based Warehouse Management System.
- Integrated a jQuery store locator plugin into the checkout module of the site for users to be able to choose from over 300 Rexall store locations for in-store pickup.
- Interacted with the client to clarify requirements and provided technical support for various issues.
- Skillfully managed and mentored multiple co-op students during their tenure with our team.
- **Tech Stack: AWS, Python, PHP, Java, JavaScript, MySQL**

Lucova Inc.

Toronto, ON

Software Developer

Oct. 2016 – Sep. 2017

- Developed an App Admin Portal that presented usage metrics of the company's services and generated financial invoices for the clients based on those metrics, using AngularJS.
- Frequently added new features and bug fixes to the FreshX and Eatable android apps that were used by university students to complete over 1K transactions per day.
- Revamped android apps with a new and improved UI built using Angular 2.
- Used Ruby to create an Office Dashboard built on top of Shopify's open-source dashboard called Dashing, that allowed all of the employees to follow the daily usage statistics on a TV screen.
- Executed new scripts and updated queries in MySQL and MongoDB to update databases and optimize performance.
- **Tech Stack: AngularJS, Angular 2, Java, Ruby, JavaScript, MySQL, MongoDB, Android Studio**

EDUCATION

University of Toronto, Scarborough

Toronto, ON

Bachelor of Science in Computer Science

Sep. 2012 – Aug. 2016
